South Burlington's Four Census Tracts

2019 American Community Survey

Five year estimates, 2015-2019

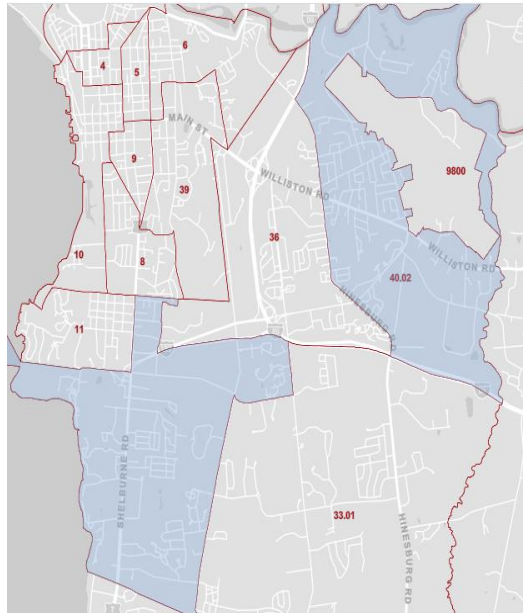

DRAFT

Vince Bolduc

We are fortunate that the City of South Burlington is part of the Burlington Metropolitan area and thus can be statistically analyzed by smaller enumeration areas called Census Tracts. This is one of the benefits of our size and level of urbanization, quite unusual in our state. While the Census Bureau attempts to create Tracts that are socially, economically, or demographically homogeneous, it has mixed successes. With the exception of the Southeast Quadrant (SEQ), the remaining tracts are not widely recognized by any labels with formal administrative significance, although they are roughly congruent to the Legislative districts for representation to the Vermont House. Among the four Tracts, the SEQ stands out as displaying unusual socio-economic homogeneity. It is also identified as “the SEQ” in the South Burlington Comprehensive Plan and stands out as displaying the most “elite” social and economic characteristics of any Census Tract in the City. As the reader can see, it is distinctive in many ways and casual observation of residents do not contradict this characterization. In comparison, Census Tract 33.04 is quite diverse, extending from Overlook Park on Spear Street to Lake Champlain and the northern border of Burlington. I have labeled this Tract “Spear to Lake.”

It is very important to note that all the data from this American Community Survey (ACS) is based on sample surveys taken monthly over a period of five years and is subject to a broad range of sampling error as explained in the methodology sections of the “Design and Methodology Report” (see <https://www.census.gov/programs-surveys/acs/methodology/design-and-methodology.html>, last revised in July of 2020.) The errors are proportionately largest when the subject matter is a subsample of the whole, such as the numbers of minorities in each Census Tract. Respondents also create errors in the data when they over or under estimate their answers on such questions as their income or the value of their homes. These caveats notwithstanding, the resulting statistics are insightful and often covers subjects not under the purview of City government. Any conflicts between official City data and data from these Census surveys should favor the City data as the more accurate.

For the sake of convenience, this report shall use these labels for each of the four Census Tracts:

Census Tract 33.04 (left) will be labeled as “Spear to Lake”
Census Tract 40.02 will be labeled as “Airport”

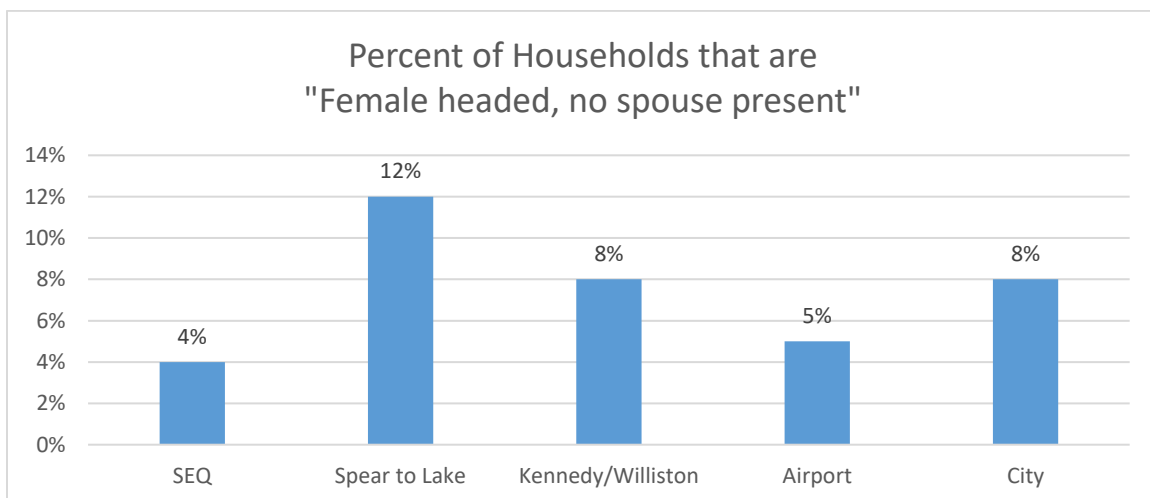

Census Tract 36 (north of 89) will be labeled as “Kennedy/Williston Rd”
Census Tract 33.01 will be labeled the Southeast Quadrant

A. Population Composition

*The ACS estimates 966 Asians and 243 Blacks in the City.
In Vermont, 1.4% identify as “Asian” and 1.3% identify as Black.

B.Family and Households

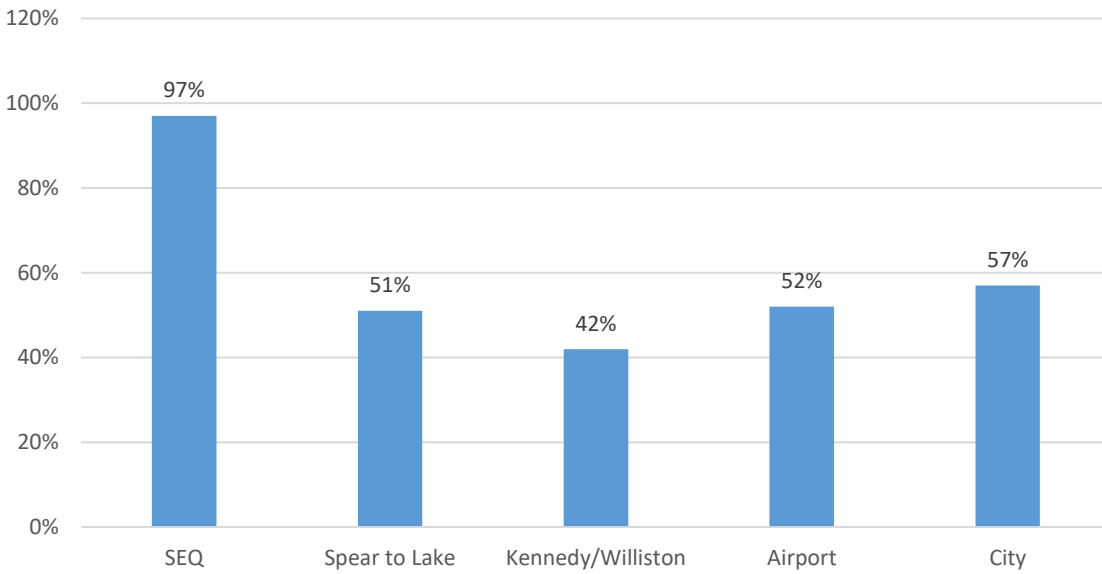

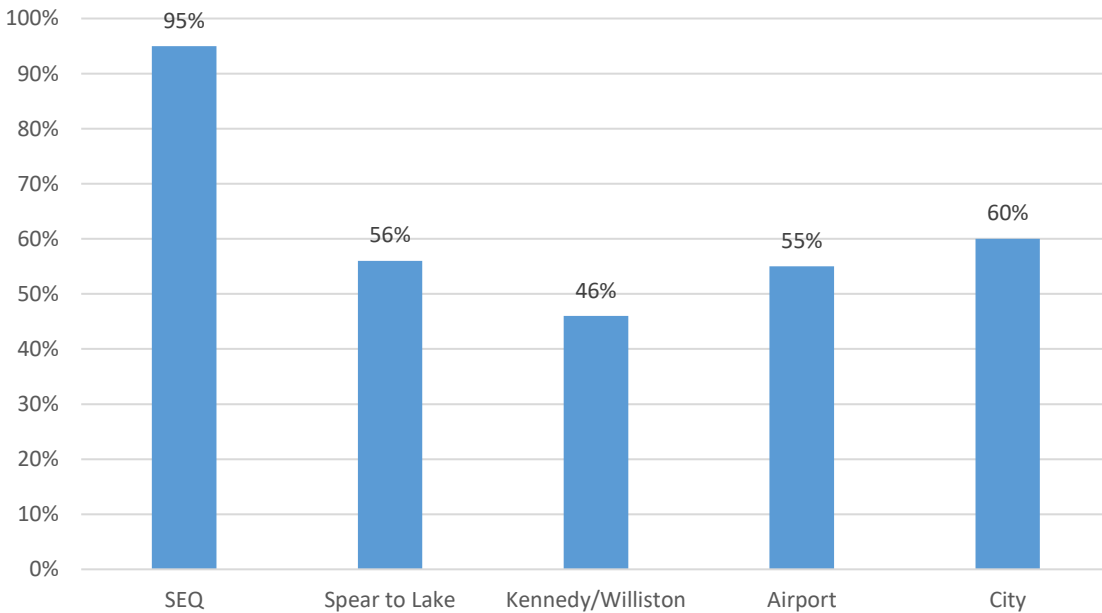

C.Housing

Percent of Housing Units
with Exactly One Unit in the Structure

Housing Units Occupied by Owner

Vermont homeownership rate: 71%; U.S.: 64%

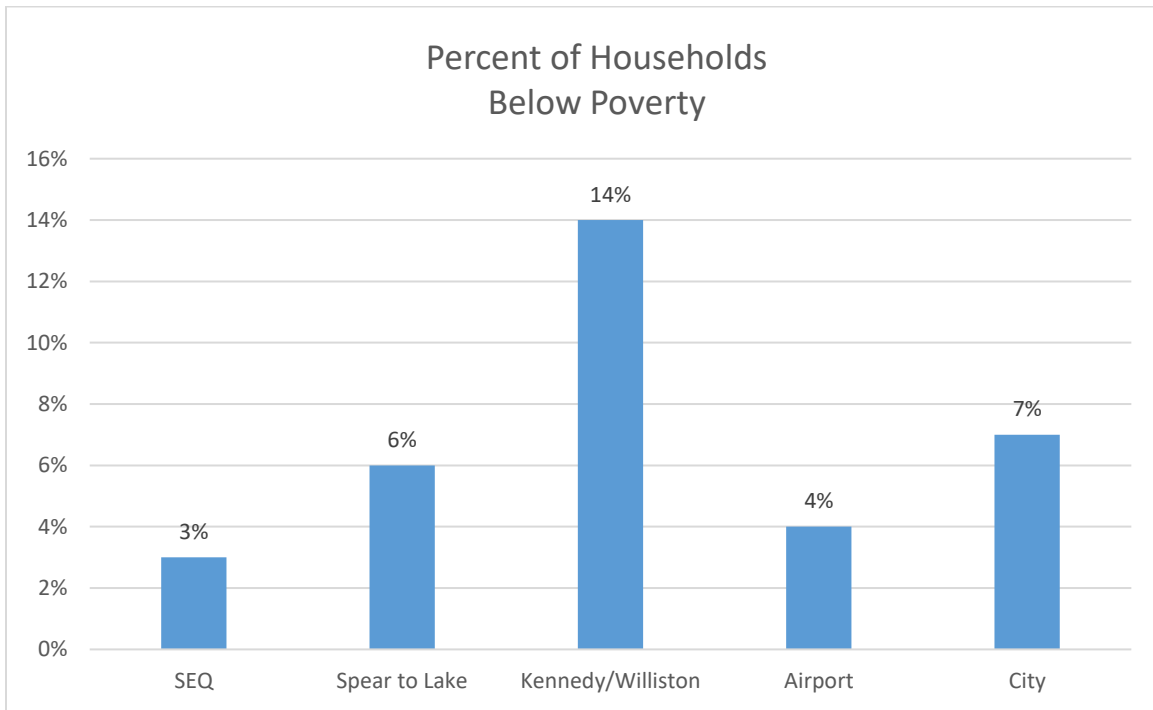

D.Measures of Social and Economic Status

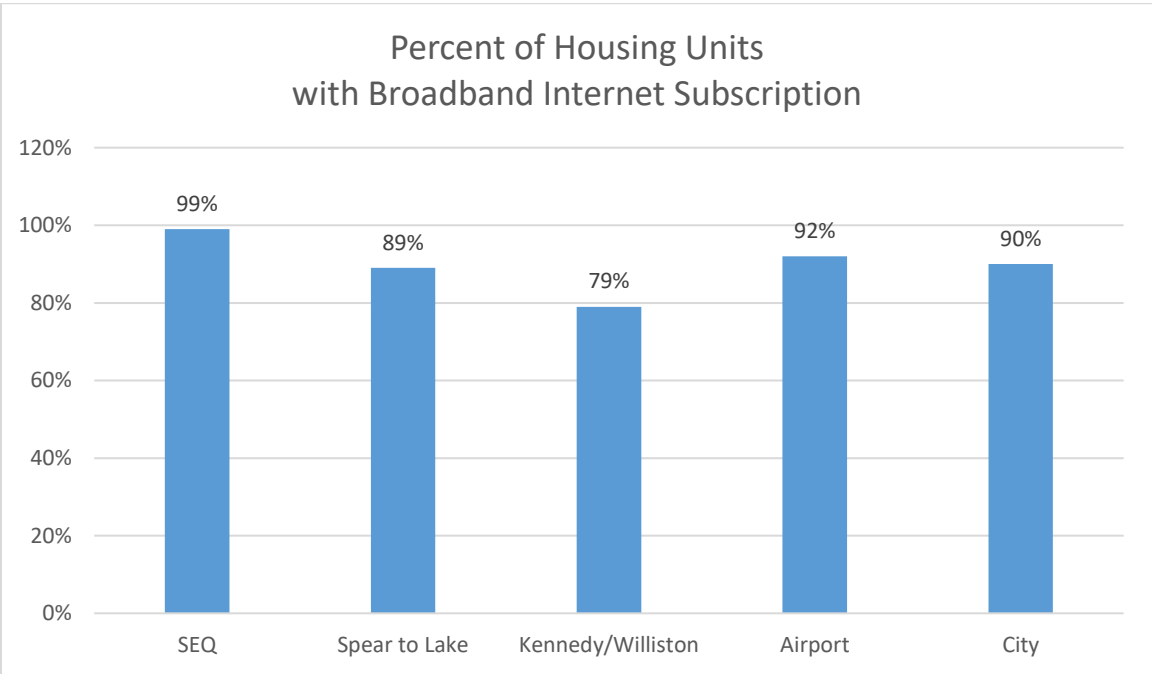

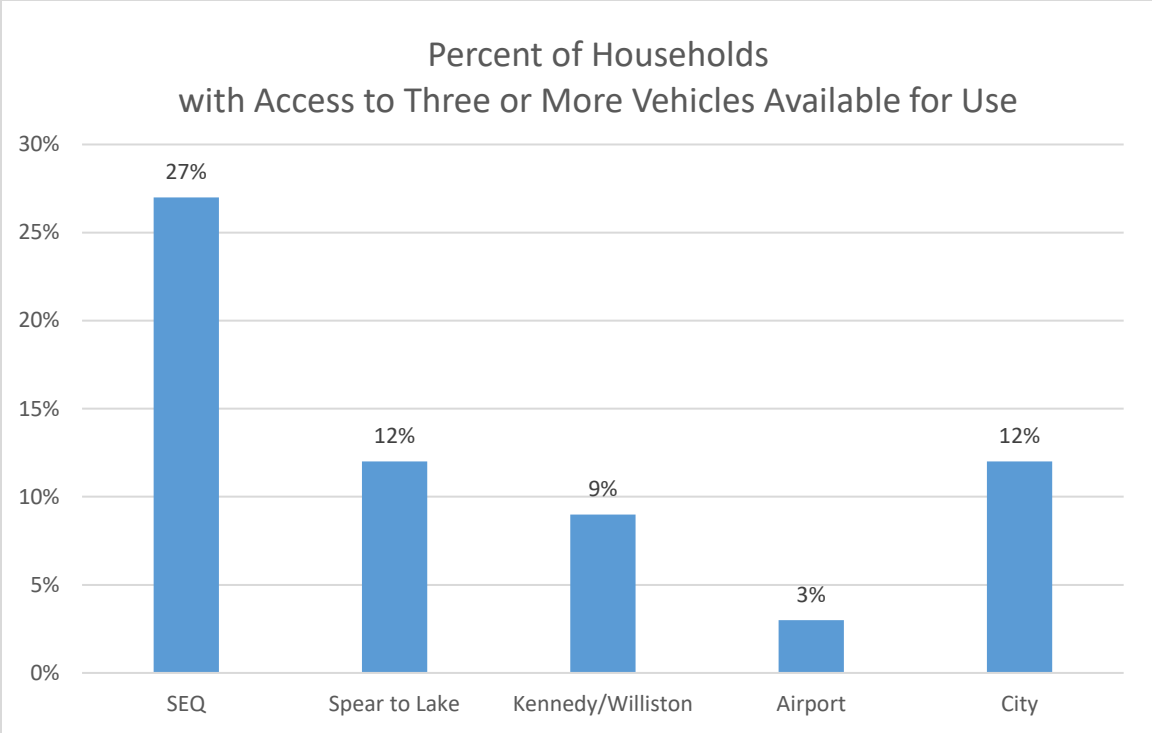

Median household income in Shelburne: \$82,895; VT: \$63,001; U.S.: \$65,712

Median housing value in VT: \$233,200; U.S.: \$240,500

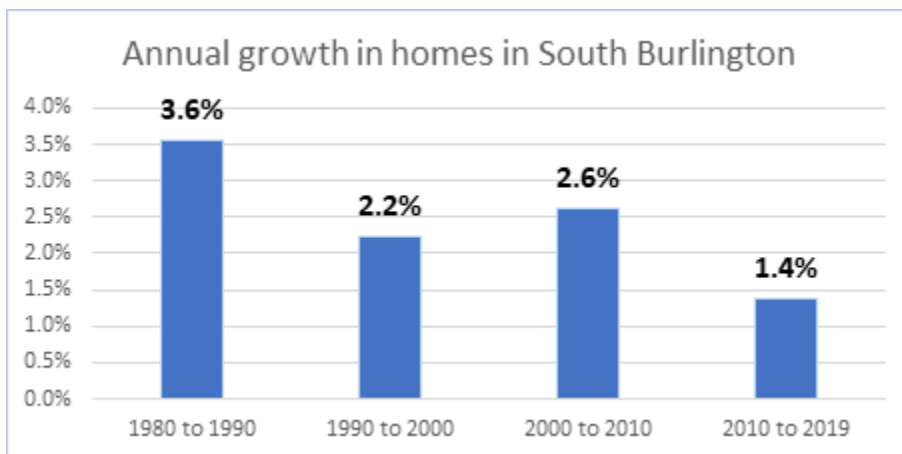

Data about home building in South Burlington, 4/5/2021

There were 76 new homes permitted in 2020 but the annual average in the past decade is 122 homes. As shown below, there is a good bit of fluctuation from year to year. For more details about building permits, see <https://www.housingdata.org/profile/housing-stock/building-permits>.

In terms of homes built and occupied, the average annual rate is at an all-time low for the City (1.4%). For more info on this, see <https://www.housingdata.org/profile/housing-stock/rate-of-change>
